

TETRAHEXAFLEXAGON VARIATION 1/1

FRONT

TETRAHEXAFLEXAGON VARIATION 1/1

Once cut out, pre crease all triangles back and forth. Glue the backside below such that the reverse side of the C_6 triangle is behind the B_6 triangle and the B_1 triangle is behind the D_5 triangle. Once glued, crease the triangles again and fold together the three pairs of Ds. You will have a horizontal string of triangles. Fold together the two pairs of C triangles. Adjust the two ends so that triangle A_1 folds over the outside of the flexagon and can be pasted onto the plain white back of Triangle D_5 . All the As should be on one face of the completed flexagon and the flexagon will have a uniform thickness of 2 sheets of paper.
